DefendAir - Security & Asset Protection Benefits

defendAir has been developed specifically for the aviation industry as an evolution of the traditional lock and seal methods of securing high value aircraft carts and canisters from both opportunist and organised theft.

- Adds another layer of security to some of the more valuable and targeted in-flight containers
- Provides a clear visual deterrent
- Reduces the potential for opportunistic and organized theft
- Fully EASA approved modification for use on ALL wide body jets in current use by major airlines (also incl. Airbus A380) to all commonly known IFR containers plus many other container models
- Instantly identifies when a cart has been compromised with a permanent 'ALERT' message on the screen (until downloaded or reset)
- Seal number or cart status displayed permanently, such as when the cart is closed but has not been locked
- Downloaded event log precisely identifies WHEN the attack or door operations took place, allowing a loss investigation to work out WHERE the cart was and so WHO was responsible for it, even how long it was open for
- Seal has a 10-year lifespan
- Simple, clean installation that can be easily replaced for maintenance or even removed at end of life if desired
- Seal log database can provide equipment usage and maintenance data
- Compatible with all known current airline paperwork and procedures
